FEMA Disaster Housing and Hurricane Katrina: Overview, Analysis, and Congressional Options

Summary

In light of the post-Hurricane Katrina criticism directed at the Federal Emergency Management Agency’s (FEMA’s) housing policies and overall performance of its mission, Congress could opt to consider how disaster housing needs are traditionally addressed under the Stafford Disaster Relief and Emergency Assistance Act (P.L. 93-288, as amended). How did FEMA’s approach during Katrina differ from previous disasters and why? Should FEMA have pursued expanded authorities at the start of the disaster? Should housing vouchers have been used earlier and tailored to the disaster event? With a substantial amount of available funding provided by Congress, but without requesting expanded authority, FEMA found its sole option was to use traditional disaster housing practices. Those practices, successful for disasters of a historically familiar size, were hard-pressed to meet the unprecedented demands of the Katrina catastrophic disaster.

There are potential events (New Madrid earthquake or other large natural or terrorist events) that could conceivably produce many of the same challenges presented by the Gulf Coast hurricane season of 2005. Those challenges include large, displaced populations spread across the nation and separated families unable to return because of the loss of not only their homes but also their places of employment. In short, federal disaster housing policy may be at issue in the 110th Congress, because, as Hurricane Katrina illustrated, the continued existence of communities after a catastrophic event involves extensive federal assistance issues.

In the past, FEMA’s approaches have turned on practical and theoretical considerations. Practical considerations include the agency’s ability to house families and individuals within a short time frame and in proximity to the original disaster, and to make contact with the hundreds of thousands of applicants who registered for assistance after the disaster. Some of the theoretical policy considerations include questions of equity, self-reliance, federalism, and the duration of federal assistance. Those considerations, in turn, lead to process questions of program stewardship and the potential for waste, fraud, and abuse of federal resources.

The Post-Katrina Act, enacted in October of 2006 (P. L. 109-295), includes changes in FEMA housing policy that provide the President with greater flexibility for meeting the challenges of disasters on a large scale. Also, legislation before the 110th Congress, such as H.R. 1144, would ease the cost-share burden for some housing costs and other disaster relief programs. Future debate on the housing issue will also be informed by the report on the National Disaster Housing Strategy (as directed in P.L. 109-295) that is due to Congress in 2007. The 110th Congress could opt to continue to examine and debate whether those legislative changes, as well as the Administration’s implementation of them, suffice.

This report will be updated as warranted by events.

FEMA Disaster Housing and Hurricane Katrina: Overview, Analysis, and Congressional Options

Background

Federal involvement in disaster housing can be traced back at least as far as the Great Mississippi River Flood of 1927. At that time, federal assistance was indirect, supporting the American National Red Cross (ANRC), championing ANRC fundraising and donations to support the ANRC’s housing/sheltering mission, and generally coordinating assistance.\(^1\)

In 1951 President Truman built on the ANRC partnership in Executive Order 10221, which delegated the responsibility for federal supplemental disaster assistance to the Housing and Home Finance Administration (HHFA).\(^2\) Just over two decades later, President Nixon continued to exercise presidential prerogative with his decision to place that responsibility in HHFA’s successor organization, the Department of Housing and Urban Development (HUD). Administration officials created the Federal Disaster Assistance Administration (FDAA) to carry out temporary housing and other disaster response and recovery programs. The FDAA was one of the legacy components subsequently absorbed into FEMA in 1979 under Reorganization Plan Number 3.\(^3\) The federal government’s temporary disaster housing mission (an integral part of its overall authorities for disaster response and recovery) has remained at FEMA for more than a quarter of a century.

The Robert T. Stafford Disaster Relief and Emergency Assistance Act (P.L. 93-288, as amended) authorizes the President to provide temporary housing and other disaster response and recovery activities. Through Executive Orders this authority has been delegated to FEMA, and other federal departments or agencies as assigned.

---

\(^1\) For more information, see CRS Report RL33126, Disaster Response and Appointment of a Recovery Czar: The Executive Branch’s Response to the Flood of 1927, by Kevin R. Kosar. Almost 80 years later the same process (working through the ANRC and a network and system established by that organization) would be the initial entry point for the Federal Emergency Management Agency (FEMA) in the housing response to the needs of Hurricane Katrina victims.

\(^2\) Executive Order 10221, Federal Register, vol. 16, March 6, 1951, p. 2051.

by FEMA. This act authorized discrete programs, including the Individual and Households Program (IHP), along with other programs intended to address the unmet needs resulting from a major disaster of families, individuals, and state and local governments.

Assessing the performance of government at every level to respond to disaster victims who need housing assistance involves consideration of the continuum of options available to FEMA in its sheltering and housing mission. FEMA traditionally uses two separate Stafford Act authorities to carry out this mission — Section 403 authorities for emergency sheltering and Section 408 for temporary housing. Distinct units within FEMA implement these housing authorities. The 403 provisions are administered by the Public Assistance (Infrastructure) Branch in the Recovery Division, while the 408 provisions are under the purview of the Individual Assistance Branch within that same division.

Stafford Act Section 403

Section 403 provides for general federal assistance to meet immediate threats to life and property. This aid may include medicine, food and other consumables, and work and services performed on public or private land. It is the work and services category that is further defined to include debris removal, search and rescue services, emergency medical services, emergency mass care, and emergency shelter. The assistance provided by states and/or FEMA immediately following a disaster is usually referred to as “emergency shelter.” Emergency sheltering can take a variety of forms, some of which were adapted to meet the special needs following Hurricane Katrina.

Traditional Stafford Act Sheltering/Housing. This type of 403 assistance can take the form of mass shelters (such as those run by the Red Cross and designated by local governments), cruise ships (used for the first time after Hurricane Katrina), emergency group sites (using manufactured housing), rental assistance, and other supporting services paid for by state governments and reimbursed by FEMA. While elements of 403 are occasionally employed for disaster response, the sheltering provision is rarely used on a vast scale. The emergency aid in Section 403 is generally cost-shared, like other elements of the Stafford Act, on a 75% federal share, 25% state share. Since 403 is emergency sheltering, this program is used to house victims immediately and does not include a test for eligibility before shelter

6 In a letter dated January 18, 2007, from DHS Secretary Michael Chertoff to Senate Homeland Security and Governmental Affairs Committee Chair Joseph Lieberman, DHS announced it was changing the name of the Recovery Division to the Disaster Assistance Division.

7 42 U.S.C. § 5170b.
is provided, unlike Section 408. Help under Section 403 generally is short term in nature and is provided in facilities close to the disaster area.

**The Katrina Experience.** Due to the unusually severe, widespread destruction, and dispersal of victims caused by Hurricane Katrina, Section 403 shelters were funded throughout the nation. Accordingly, FEMA issued disaster-specific guidance and other supporting documents delineating section 403 eligibility for the multitude of states involved in this unique catastrophic event. Though 403 sheltering aid is intended to be limited term help, after Katrina those limits were stretched due to the magnitude of this event. That stretching also included a 100% federal share for the emergency sheltering costs for all states hosting FEMA evacuees for up to 12 months, though shorter leases were encouraged.9

**Traditional Mass Shelters.** The cooperation between FEMA and the ANRC has been stipulated in a Memorandum of Understanding (MOU) between the two agencies that specifically references their coordination of emergency mass care.10 They are also the two parties charged with the responsibility for carrying out Emergency Support Function #6 - Mass Care, in the National Response Plan (NRP).11 The great majority of the hundreds of shelters used following Katrina (and most disasters) were managed by the ANRC. In addition, many other independent shelters were and continue to be run by state and local governments and non-governmental organizations.

**The Katrina Experience.** The shared responsibility in the NRP for mass care was a change from the past operational practices under the Federal Response Plan (FRP), which identified the Red Cross as the sole lead for the function. Shared responsibilities had begun prior to Katrina, but this disaster was the most strenuous test of this new arrangement. In the context of the Hurricane Katrina experience, the quantity and quality of the available emergency shelter space has been questioned by various reports, including the House Select Bipartisan Committee to Investigate the Preparation for and Response to Hurricane Katrina Report, which noted that “State and local governments made inappropriate selections of shelters of last resort. The lack of a regional database of shelters contributed to an inefficient and ineffective

---

11 An NRP revision is being drafted to give primary authority to FEMA with the Red Cross as a supporting partner, and thus still responsible for emergency feeding and sheltering for the general population. See letter from Neal Denton and other ANRC officials to Congress, February 21, 2007.
evacuation and sheltering process.” The committee also acknowledged the difficulty of the task. The report noted that some experts believed that the shelter system eventually built up over the opening weeks of the Katrina disaster, with the inherent coordination that was necessary, was similar to “opening a Fortune 500 company in a couple days’ time.”

FEMA provided to the states and their shelter partners disaster-specific guidance that listed, in great detail, the costs that would be eligible for reimbursement. Despite the guidelines, the ANRC and others involved in sheltering still coped with significant questions raised by the scope of the event. Emergency shelters are dependent not only on adequate space but also on many other logistical concerns including health and safety, the ability to serve special needs populations, and the availability of trained volunteers to staff these facilities. In the case of Hurricane Katrina, the size and scope of this disaster was truly unprecedented in comparison to other large events; as such, the disaster strained the traditional shelter system.

As noted above, emergency shelters funded under Section 403 authority are intended to be temporary housing solutions. The decision by the Administration to accelerate the closing of the emergency shelters and move disaster victims to more suitable housing situations by October 15, 2005, meant that many families and individuals had to quickly find housing alternatives. At its peak, the post-Katrina mass shelter network provided shelter for over 273,000 evacuees. Although charting such an ambitious goal did speed up the emptying of the shelters, it also meant that alternative forms of housing were needed prior to the registration of evacuees with FEMA, and before any individuals and/or families could be presented with any other options for their long term housing goals.

**Cruise Ships.** The use of cruise ships as emergency shelters had reportedly been considered by FEMA officials as early as 1989 (following a disaster in the U.S.

16 Dan Glaister, “US Spending 6 Million Pounds a day on hotels for Hurricane Katrina evacuees,” *The Guardian* (UK), [http://guardian.co.uk/international/story/0,3604,1591796,00.html], visited May 19, 2007. While the October 15 deadline was not met in all cases due to a lack of availability of hotel/motel rooms or ongoing efforts at family reunification and other considerations, it was generally observed.

Virgin Islands). However, this form of shelter had never actually been employed.\textsuperscript{18} For island disasters, and in coastal areas in particular, cruise ships were considered to be a strategically valuable form of shelter that could be brought rapidly to remote locations. Despite arguments for their use, however, no such contracts had previously been let prior to Katrina.

\textbf{The Katrina Experience.} Given the unprecedented challenges posed by Katrina, FEMA chose to use the cruise ship alternative and asked the Navy to charter these ships.\textsuperscript{19} The ships’ most useful capabilities were to house both victims and relief workers in private rooms in close proximity to the disaster area, and to have on-site feeding facilities. The ships offered the possibility that some of the victims of the disaster could be a part of the rebuilding process by giving them access to the area where the work was being conducted. For a catastrophic disaster, this is a serious concern, particularly when a large work force is arriving in an area that has had a mass evacuation coupled with the destruction of rental units. Although housing shared by victims and workers arguably has benefits, some disadvantages were identified. For example, at a House Financial Services hearing on Katrina housing, one Member of Congress noted that the large FEMA contingent of workers in the area actually used a significant part of the remaining resources (both hotels and other housing) and suggested that FEMA staff were, in fact, in competition with local disaster victims wishing to return to the area.\textsuperscript{20}

During their use the ships housed over 8,000 people and served over two million meals to Katrina victims and workers helping in the recovery.\textsuperscript{21} While meeting emergency needs, critics questioned the cost of housing victims on the ships. Some doubted the efficacy of the plan, the location of some ships, the cost and length of the contract, and the process used to arrive at the agreement. As one story noted: “The six month contract — staunchly defended by Carnival but castigated by politicians from both parties — has come to exemplify the cost of haste that followed Katrina’s strike and FEMA’s lack of preparation.”\textsuperscript{22}

While the cruise ships attracted considerable media attention, one step taken in this process may warrant further consideration. The care of children in this situation is of interest, particularly since it served as a harbinger of what would become a very

\textsuperscript{20} Testimony of Representative Charles Melancon, in U.S. Congress, House Committee on Financial Services, \textit{Federal Housing Response to Hurricane Katrina}, hearing, 110\textsuperscript{th} Cong. 1\textsuperscript{st} sess., February 6, 2007.

significant issue with regard to FEMA’s management of its large mobile home and trailer parks. On one of the Carnival ships, the Holiday, the organization Save The Children (best known for its work overseas) joined with Carnival and other corporate givers to set up a child-care center. As summarized by the organization: “Save the Children worked with a local licensed child-care provider to turn the Holiday ship’s ‘Doc Holiday Lounge’ into a child-care center that served about 70 children each day. Child care services were difficult to find as families sought to recover.”23 The same perceived needs would surface as areas of contention at FEMA’s emergency trailer parks that were established on the Gulf Coast when FEMA child care services or other amenities were eligible expenses for the management of the trailer parks. Similar concerns have long been a part of temporary housing operations, but the scale of the post-Katrina disaster environment brought greater scrutiny to the issues of supportive services for large temporary housing sites.

**Traditional Hotels and Motels.** The local chapters of the ANRC routinely provide brief hotel or motel stays as a form of emergency housing around the nation on a daily basis for disaster victims, including the victims of fires or other local emergencies. The local ANRC chapters are frequently reimbursed by FEMA for this work in presidentially declared disasters of a much smaller scale than Katrina. This form of assistance is generally referred to as “transient accommodation.”25 However, because the practice of providing transient accommodations involves working with much smaller numbers of victims, the length of stay is usually brief, and the task of finding more suitable accommodations not as daunting as the Katrina experience.

**The Katrina Experience.** Hotels and motels were used around the country both by self-evacuated families and individuals and by disaster evacuees who were moved out of shelters and into these establishments by the ANRC and FEMA. Hotels and motels in the disaster area were also used to house relief workers.

Much of the work of placing victims in these facilities was managed by a contractor, Corporate Lodging Consultants (CLC), that worked originally for the Red Cross and then FEMA. CLC engaged the hotels and motels to track occupancy and managed the payments to the participating facilities.26

Many residents in harm’s way had “self-evacuated” themselves to hotels and motels in more removed areas as the storm approached. However, the majority in these establishments were families and individuals who moved from mass shelters to the hotels and motels to meet the October 15, 2005 deadline. This resulted in an extraordinarily high combined population in these commercial facilities. The peak

---

25 44 C.F.R., § 206.101, (g), (ii).
was reached in late October when 85,000 households were housed across the country in hotels and motels in 48 states.27

Due to the unique circumstances created by Hurricane Katrina, a traditionally short-term solution for small emergencies became a national program of unprecedented size. This greatly expanded program provided some privacy for families that had been so deprived for an extended period of time because they were in mass shelters. The hotel/motel option gave displaced victims a chance to be in a room with their own private space and a discrete address. However, the deadline for the movement out of shelters left little or no time for establishing protocols for lodging costs or exploring alternative housing.

**Traditional Apartment Rentals by States.** No evidence or data exist of a previous use of state contracting for apartments for disaster victims under Section 403. The states traditionally are engaged in Section 403 work through the debris removal program, congregate sheltering, and some other distinct missions such as search and rescue work or the provision of temporary school facilities.28 The FEMA housing mission is, in part, carried out in cooperation with the states. But that cooperation generally entails state assistance only in locating temporary housing sites and in the administration of the Other Needs Assistance (ONA) program. ONA funds are used for furniture and clothing and other related needs, a use that works in tandem with the Section 408 housing program (discussed below).

**The Katrina Experience.** Following the evacuation of Katrina victims (both self-evacuated and those transported by FEMA) to many states, some of those states: rented apartments for the evacuees; provided other necessary support such as furnishings, food, transportation, and limited medical assistance; and made the rent payments that were subsequently reimbursed by FEMA under Section 403. There were, at the peak of this operation, approximately 67,000 apartment leases in 32 states. While the original instructions by FEMA offered to reimburse leases of up to 12 months, states were encouraged to engage in shorter leases if possible.29

States were solicited by FEMA to accept evacuees. They were asked to provide information to FEMA on the number of evacuees they could accommodate, the date they could begin receiving them, and the location of the receiving point. The potential hosting states were promised full reimbursement of their disaster related costs, with the general instruction to treat the Hurricane Katrina evacuees as they would disaster victims within their own state borders.30

---

30 Interview with former FEMA Recovery Division Director Daniel Craig, Washington, DC, January 22, 2007.
The Transition to Section 408

Due to the damage to permanent housing stock (both private homes and rental properties) by Hurricane Katrina, the transition from shorter-term Section 403 sheltering/housing to traditional, longer-term Section 408 temporary housing assistance was a difficult one. Normally, FEMA works with a relatively small population, which traditionally makes this “crosswalk” easier; however, that was not the case for this catastrophic event. FEMA had to contact all recipients of 403 assistance in order to establish their eligibility for longer-term aid under Section 408. That contact also had to include an explanation of the process as well as available housing options, the location of some housing resources, and the time-tables involved. Disaster victims also had to be assured that the next form of housing assistance was available for those deemed eligible. Accordingly, checks for rental assistance, or a unit of manufactured housing, had to be available before the applicants were moved from their current residences.

Eligibility for Section 408 assistance is based on several conditions, including a finding by FEMA that:

- the applicant’s primary residence is unlivable;
- the applicant is experiencing financial hardship and;
- there are other related difficulties in the aftermath of a declared disaster event31

Eligibility determinations are routinely made in most disaster situations by staff at FEMA’s National Process Service Centers (NPSCs). At the NPSCs, staff take registrations (both telephonically and on-line) working in concert with FEMA’s on-site staff based at the Joint Field Offices (JFOs) in or near the affected area, and with FEMA’s contracted housing inspectors.

A major challenge to this traditional approach rested in the sheer number of victims involved in the Katrina disaster; thousands of evacuees were placed in hotel/motel rooms in 48 states as well as in state-rented apartments in 32 states. The wide dispersal of victims compounded the transition process. Also, this outreach mission was especially difficult to accomplish within shifting deadlines established by the Department of Homeland Security (DHS)/FEMA. Due to the extent of the devastation in the affected area, housing inspections could not always be conducted within the usual time frames; such inspections are generally critical to eligibility decisions. In addition, FEMA had to cobble together a series of outreach teams to spread out among the diaspora of disaster victims. These teams consisted of personnel from the Corporate Lodging Consultant (CLC) contractors, FEMA Community Relations staff, and available staff from the respective FEMA regional offices. The resources of these groups were already greatly taxed by their own disaster assignments.

31 44 CFR §206.101 (f).
DHS/FEMA had been contacted as early as September 6, 2005, by the Refugee Council USA with a plan to reach out (through the Refugee Council’s local affiliate network) and provide case management services to the displaced residents from the Gulf Coast.\textsuperscript{32} The council had developed the plan working in conjunction with the White House Homeland Security Council and the Office of Faith-Based Initiatives and its traditional partners at the Department of State and the Department of Health and Human Services. Some discussions ensued which questioned the authority of FEMA to carry out such a program as well as the potential cost. The plan was not adopted.\textsuperscript{33}

Two competing imperatives faced FEMA: provide safe housing for disaster victims and remain responsible stewards of federal funds. The goal of transferring applicants from hotels, motels, and state-leased apartments to apartments paid with Section 408 rental assistance and manufactured housing was intended to address both goals, but some contend that efforts to achieve both ends resulted in a disruptive and complicated process.\textsuperscript{34} It was within this environment of shifting deadlines and lingering questions of applicant eligibility that reports of waste, fraud, and abuse within the program surfaced.\textsuperscript{35} The situation was also aggravated by recurring litigation that has embroiled FEMA, applicants, and public interest groups over the last year.\textsuperscript{36}

As of the end of 2006, approximately 40,000 households had been moved from 403 to 408 funding – either through CLC payments to landlords out of 408 funds or from 408 payments made to applicants to continue apartment rentals.\textsuperscript{37} FEMA’s standard presumption is that those households previously in 403 apartments and qualified for, but not receiving, 408 payments represents people no longer in need of FEMA assistance or those whose landlords did not make contact with CLC to maintain the arrangement.\textsuperscript{38}

\textsuperscript{32} Karen Walsh, \textit{The Hurricane Katrina Disaster: RCUSA Contributions to the Relocation of Displaced Americans}, DRAFT, September 6, 2005, available from the author.

\textsuperscript{33} However, the Post-Katrina Act, effective October 6, 2006, includes a provision that provides the President the authority to “provide case management services, including financial assistance, to state or local government agencies or qualified organizations to provide such services…” See P.L. 109-295, 120 Stat. 1453.

\textsuperscript{35} Testimony of Gregory D. Kutz, Managing Director, Forensic Audits and Special Investigations in U.S. Congress, Senate Committee on Homeland Security and Governmental Affairs, \textit{Hurricane Katrina: Waste, Fraud and Abuse Worsen the Disaster}, GAO-06-403T, hearing, 109\textsuperscript{th} Cong., 2\textsuperscript{nd} sess., February 13, 2006.

\textsuperscript{36} For additional information see, CRS Report RS22560, \textit{Disaster Housing Assistance: A Legal Analysis of ACORN v. FEMA}, by Kamilah M. Holder.

\textsuperscript{38} Ibid.
Stafford Act Section 408

Stafford Act Section 408 housing is administered through the Individual and Households Program (IHP), which consists of temporary housing and Other Needs Assistance (ONA). The housing portion is 100% federally funded. The ONA part of the IHP program (furnishings, uninsured medical costs, funeral expenses, etc.) is cost-shared with the state, on a mandatory 75%/25% basis. The 408 amounts spent for rental/repair/replacement assistance and ONA are deducted from an overall IHP cap for each household, currently $28,200 (this amount is adjusted annually based on the Consumer Price Index). Direct housing assistance – that is, costs associated with mobile homes and travel trailers, is not deducted from that amount due to difficulties in precisely calculating the amount of assistance involved. In addition to the Section 408 temporary housing assistance, other federal housing resources were also made available by other federal agencies.

**Traditional Section 408 Rental, Repair, and Replacement Assistance.** Assistance under Section 408 includes rental assistance to disaster victims who have found suitable rental property. It also includes repair assistance to make a dwelling habitable, and grants to contribute toward replacement housing for an applicant whose home has been destroyed by a disaster event.

**The Katrina Experience.** One of the greatest challenges in the post-Katrina environment was the dearth of available rental property in the damaged area. As with private homes, many of the rental units also sustained major damage or were destroyed. There were attempts to increase the housing stock, particularly by the State of Louisiana. In recognition of the difficulties inherent in this problem, Congress enacted a provision in the post-Katrina Reform Act that would “provide for the repair and improvement of multi-family rental properties in disaster areas to increase the rental stock available to disaster victims in the immediate area.”

Another Section 408 issue that emerged was FEMA’s definition of Fair Market Rent (FMR). FEMA uses the FMR set by HUD for a metropolitan area, which includes the cost of utilities. FEMA, however, pursuant to the Stafford Act, has determined that the amount of financial assistance available is based on “the fair market rent for the accommodation provided plus the cost of any transportation,

---

39 44 C.F.R. § 206.131, (d) (2). Unlike other Stafford Act programs, the ONA cost-share cannot be waived by the President.
40 42 U.S.C. §5174, Sec. 408 (c)
utility hook-ups, or unit installation not provided directly by the President.”"\textsuperscript{44} FEMA has traditionally interpreted the utility language to mean that hook-ups are the only utility costs eligible for assistance. As a result of this difference, which was also noted in ongoing litigation, Congress amended the Stafford Act to qualify utility costs as eligible expenses.\textsuperscript{45}

Existing federal policy, notably the Stafford Act and its administration by FEMA, bases federal aid on the assumption that a household in need of temporary housing assistance will not have permanently lost employment or its principal means of support, let alone be displaced to another state. FEMA also presumes, based on typical program performance, that the Section 408 assistance provided will be relatively short in duration, generally much less than the 18 months of eligible help.\textsuperscript{46} Certainly, many disasters are far more localized within states and communities. With a localized event, the difference in employment is the commuting distance from a temporary housing location rather than the retention of the job itself.

The challenge of continuing employment is one fundamental difference between most disaster declarations and an event such as Hurricane Katrina. This unique circumstance of sudden joblessness on a great scale underlines the difficulties in applying the Section 408 authority to catastrophic major disasters of this breadth, magnitude, and duration. In essence, Hurricane Katrina exceeded all previous experience and also the perceived reach of statutory authority.

An additional consideration in the post-Katrina environment was the demographic profile of affected residents. As one report noted: “Hurricane Katrina disproportionately impacted communities where the poor and minorities, mostly African-Americans, resided. The three states where communities were damaged or flooded by the hurricane rank among the poorest in the nation.”\textsuperscript{47} This meant more renters were affected, and many victims had little means of support. These victims were sent far from home taking few or no resources with them.

**Traditional Housing Repair and Replacement.** When Hurricane Katrina struck, the housing repair element of Section 408 assistance authorized up to $5,000 in repairs to primary residences so that victims could make their homes habitable.\textsuperscript{48} These same homeowners may or may not have received a Small Business Administration disaster loan for additional repairs. The $5,000 cap had been in place for several years since the passage of the Disaster Mitigation Act of 2000 (DMA2K-Public Law 106-390).

\textsuperscript{44} Ibid.

\textsuperscript{45} P.L. 109-295, 120 Stat. 1452.

\textsuperscript{46} Interview with Donna Dannels, Individual Assistance Branch Chief, FEMA, April 16, 2007.

\textsuperscript{47} For additional information see, CRS Report RL33141, *Hurricane Katrina: Social-Demographic Characteristics of Impacted Areas*, by Thomas Gabe, Gene Falk, Maggie McCarty, and Virginia W. Mason.

\textsuperscript{48} The Post Katrina Reform Act amended this provision to remove the $5,000 cap. The overall ceiling of $28,200, however, still applies. See, P.L. 109-295, 120 Stat. 1448.
In addition to repair assistance, applicants whose homes have been destroyed can qualify for up to $10,000 to be applied toward a replacement home. This benefit is particularly available for mobile home owners without adequate insurance who can use these funds toward the purchase of another unit.

**Traditional Manufactured Housing.** FEMA traditionally uses mobile homes and travel trailers to meet the needs of disaster victims. Mobile homes are larger and are generally used to house applicants who are unable to obtain rental housing in the area. Travel trailers are smaller units that are usually parked adjacent to the home so that the individual or family can continue repairs while the home itself cannot be occupied and not have to pay for the space to park the trailer. The units are also placed on commercial lots and in parks created by FEMA for that purpose. While this is a form of temporary housing, it sometimes gains permanency for the households occupying these units. This is based on a part of the Stafford Act which provides that a unit “may be sold directly to the individual or household who is occupying the unit if the individual or household lacks permanent housing.” 49 This is usually the case for applicants without other housing options. 50

**The Katrina Experience.** Congressional testimony by a FEMA official noted that approximately 80% of manufactured dwellings were situated on private lots on the Gulf Coast. 51 This points to the large number of homes with major damage following the hurricanes of 2005. During the post-Katrina recovery phase, these trailers and mobile homes were the center of controversy for several reasons.

While manufactured housing is occasionally used, FEMA considers it the last housing option to be employed, and then only if home repairs are impractical or if there are no available units for rental assistance. But a catastrophic disaster such as Katrina removes many options. It not only spreads disaster victims across the nation but also makes home repair work difficult and slow at best. Additionally, a disaster of this magnitude wipes out most available rental housing in the affected area. With all of those factors considered, manufactured housing became the primary means of providing temporary housing in Gulf Coast communities for an extended period of time. This form of housing also drew the media’s attention due to a large number of units awaiting occupancy that have been stored in Hope, Arkansas. 52 Some of the reasons for the purchase of the excess units and the slow pace of their issuance are discussed in the Issues section below.

**Housing Inspections: Strengths and Limitations.** Traditionally, almost all key decisions in the FEMA housing mission are tied to an on-site inspection of the damaged housing by FEMA contract inspectors. The inspections provide FEMA

---

49 42 U.S.C. §5174, (d) (2) (A).
with information on the degree of damage to the structure and contents of the house. The inspectors are assigned an address, locate the home, and assess its status on a hand-held computer that enables information to be downloaded rapidly to FEMA computers. The information is subsequently merged with an applicant’s file.\footnote{U.S. Department of Homeland Security, Federal Emergency Management Agency, “Talking Points - Housing Inspections,” at [http://www.fema.gov/news/newsrelease.fema?id=5325], visited February 26, 2007.}

**The Katrina Experience.** With standing water throughout the southern parishes and counties, on-site inspections could not be conducted for thousands of homes for a considerable amount of time. As a result, FEMA used geo-spatial mapping of the area to help determine eligibility for FEMA housing assistance.\footnote{U.S. Department of Homeland Security, Federal Emergency Management Agency, “Mapping Expedites Assistance for Louisiana,” press release no. 3215-029, February 9, 2006.} Geo-spatial mapping consists of overflights of an area that can produce maps that identify the average depth of water in a specific geographic area. From these maps FEMA can then project likely damage in that area. This form of verification was fast and practical but could not offer the same detail as on-site inspection, particularly for personal losses. Another key issue realized from Katrina is that the viability of neighborhoods cannot be determined. Even though on-site inspection reports are issued for each individual dwelling, the reports do not ordinarily provide, nor is it their assigned mission to provide, a picture or an assessment of neighborhood-wide conditions. For example, are schools or stores open? Is there general accessibility to community resources? Are essential infrastructure components operational?\footnote{As a Houston housing inspector who reviewed some New Orleans homes listed as “habitable” by FEMA noted, “General neighborhoods are not yet up and running.” See, [http://www.chinatownconnection.com/houston-hurricane-katrina-evacuees.htm], visited February 5, 2007.}

**Issues for Congress**

**FEMA Group Site Location.** The reluctance of parishes near to but outside of the disaster area to host manufactured housing sites became a major impediment to development of a coherent housing plan following Katrina’s impact. In late October, 2005, the Louisiana state government requested that FEMA pay a version of “impact fees,” similar to those assessed on developers by local communities when new construction is planned.\footnote{“Louisiana’s Transitional Housing Impact Fee Plan, Draft,” October 3, 2005. Available from author.} The state believed such help would encourage the outer parishes to accept a significant number of mobile homes or travel trailers in their jurisdiction’s by helping them defer increased costs to the community caused by the new temporary sites. There is no record of FEMA responding officially to that overall proposal, but some examples of previous actions arguably indicate FEMA had given some support to the concept. Early in the disaster FEMA had set up temporary laundry facilities for one trailer park. During the hurricanes of 2004 in Florida, FEMA had assisted a sewer district to expand its capacity following the
establishment of a trailer park within that jurisdiction. In each case, these actions had been ad hoc decisions made by the leadership in the field that did not reflect official policy.57

Later, in early November 2005, FEMA housing staff in Louisiana created their own version of a “supporting services” listing to encourage more local support for the trailer parks. The proposal from the FEMA field staff was a six page memorandum that described types of assistance that could potentially be available to the hosting community from FEMA or other federal agencies. The recognized areas for additional help to the local community included road repair and traffic management, public works, and other community services.58 This proposal was not adopted, but FEMA continued to review the suggestions.

FEMA eventually decided it was authorized to provide limited community service help and sent out a two-page memo in mid-December of 2005 offering potential help for fire and safety forces that provide service to the trailer parks in their jurisdictions.59 Some FEMA staff believed the delay in arriving at a decision and the limited reach of the final decision resulted in increased reluctance on the part of local officials to host such trailer parks. FEMA’s leadership took its position from the Stafford Act quote that “the President may provide temporary housing units ....”60 Since Congress did not specifically authorize other support, FEMA concluded that no other support is implied or was legally possible when creating a temporary housing community.

**FEMA Group Site Management of Services.** FEMA’s interpretation of its limited authority to support the group sites that it had established extended not only to the surrounding community, but to services within the sites as well. FEMA considers the need for recreational facilities or services to augment educational opportunities, or other services that contribute to a sense of community to be beyond any and all Stafford Act authorities, noting that these are intended to be temporary sites. Some contend that each additional service provided is an enticement to transform a temporary site, as authorized by law, into something far more permanent. It is argued that such a site with amenities and services sponsored by the government cannot contribute to the process of helping residents transition to more permanent housing.

FEMA’s position, according to one journalist, is that all such help, if needed, should be provided by private charitable groups. However, in its interactions with charitable groups interested in providing additional services, FEMA has reportedly

57 Interviews with former FEMA staff members Mike Hirsch and Brad Gair, January 18, 2007.

60 42 U.S.C.§ 5174.
been a reluctant partner. In describing the philosophical approach to the management of a trailer park site, such as Renaissance Village in Baker, Louisiana, one reporter explained the FEMA position as follows:

FEMA is the federal agency charged with providing temporary housing to displaced people. Its officials read that mandate very narrowly – they will supply housing, and little else, for as long as 18 months while people get back on their feet. ... The government provides evacuees a trailer, water and sewer lines, and electricity. Residents must now get pretty much everything else on their own or from a charity. FEMA does not want anyone to get too comfortable here.61

In the case of Renaissance Village, some charitable and social service groups expressed particular concern because, “anyone” included nearly 370 children under the age of 12.62 Some contend that community services are a necessary component of a temporary trailer park because children need recreational opportunities and facilities and child care and related services. Others, however, believe that the establishment of services, and the long-term residency they imply, runs counter to the interest of Congress to provide minimal or temporary housing.

In a hearing of the House Transportation and Infrastructure Committee’s Subcommittee on Economic Development, Public Buildings and Emergency Management, the subcommittee chair, Representative Norton, acknowledged the complexity of the issue. Representative Norton signaled that FEMA should not be required to provide comprehensive services on site or establish “a village” that could further isolate the residents. Instead, she observed that FEMA should be providing transportation to temporary housing residents to connect them with the surrounding communities where services may already exist.63

**Delivering Housing: When and Where.** Certain issues had to be resolved prior to the installation of temporary housing for Katrina victims.

One limiting factor for housing (both temporary and permanent) was the utility problem in New Orleans. FEMA’s contractors were hard pressed to keep up with the numbers of requests for temporary housing units; the lack of utilities meant that site preparation lagged. Entergy is a private utility company that had been New Orleans’ last Fortune 500 company but found itself in precarious financial straits following the devastating event.64 The lag time on utility restoration became yet another “chicken and egg” situation. Which would come first: the arrival of housing units or the utilities to support them? A similar question arose regarding neighborhood

---

schools: should the schools be repaired, or should the students be present first? The inertia that resulted from these sticking points has been a common factor for post-Katrina communities. Local leadership and community-based decision making organizations arguably are equipped to set the priorities that could move these steps forward. FEMA’s partnership, particularly the interaction of a Federal Coordinating Officer and staff with experience in similar situations, can be useful. Their cooperation with local leadership can contribute to a more effective transition for the community.

Issues also arise as to where temporary manufactured housing is or should be sited. FEMA’s regulations prohibit the placement of mobile homes in flood plains. This has discouraged the placement of housing needed by Katrina victims. FEMA has, however, permitted the use of travel trailers (rather than mobile homes) in such vulnerable areas under the assumption that they can be moved out of harm’s way more rapidly. This assumption is questionable when such large numbers of travel trailers are being used in a concentrated area and FEMA required that contractors strap down all of the manufactured housing installed on the Gulf Coast. The increased safety created by tying down the mobile homes restricts mobility. This is a dilemma without a simple answer since it involves the pursuit of two goals potentially in conflict — the need to provide housing in proximity to the disaster-stricken area and the assurance that safe temporary housing will be placed in secure, disaster resistant areas.

An additional topic of interest is the influence of FEMA’s temporary housing program and policies on eventual resettlement and rebuilding decisions at the state and local levels. Some of the FEMA recovery program elements fall outside the defined temporary housing arena but have a direct impact on rebuilding and other related developments within the disaster area. This includes elements such as transportation costs for victims to return to their homes, the establishment and locations of group temporary housing sites, and the progress of infrastructure repair and mitigation projects and the support they could provide for neighborhood redevelopment.

FEMA involvement in community rebuilding is considerable, but local decision making is also important to accelerate the work. FEMA actions are dependent on choices and priorities established by the state and local governments, in terms of both infrastructure repair and the priority given to debris removal and mitigation projects. Conversely, when fundamental decisions, like those concerning cost-share waivers are delayed, very little can proceed at the local level. The experience of FEMA (and its federal, state, and local partners) over the last two years should provide a guide to what worked well, what did not, and what options remain under current authorities.

**Equity in Assistance.** A key concern in the implementation of disaster temporary housing programs was how to achieve equity with a huge and diverse population that was receiving various degrees of assistance. The variation depended not only on a family’s or individual’s circumstances (for example, whether relatives

---

65 44 C.F.R. §206,117 (C)
were able to provide help), but also on the resources of the receiving state. One concern was that those receiving 403 assistance would have all of their 408 accounts remaining (referencing the $28,200 maximum available under the Individual and Households Program), while those who had successfully registered and received help through more traditional FEMA processes were already drawing down from the total Section 408 amount available to them and their families. Given the unprecedented size of this disaster, the 403 solution bought necessary time while the 408 processing went on. However, as a result, some were arguably penalized for their prompt application for Section 408 aid.

Efforts to address the equity problems in the delivery of FEMA disaster housing may consider the exclusion of initial housing costs under Section 408 from the legislative caps (see Options section of this report). Under this arrangement, all applicants would begin with the same amount of available resources within their IHP accounts. This change, however, would increase costs since it would be equivalent to increasing the amount of help made available. Further, all of the aforementioned considerations do not include the assistance some families and individuals received from charitable groups as well.

**Choice for Disaster Assistance Applicants.** Disaster victims have limited discretion to choose among the types of housing assistance authorized. The Stafford Act authorizes the President to provide “financial assistance, and, if necessary, direct services.” Those applying for help must generally accept the form of housing offered. This is underlined in FEMA’s regulations, which stress that an applicant is “expected to accept the first offer of housing assistance” and threatens forfeiture of benefits if aid is refused. How much choice should be involved when the government is providing a direct benefit to the disaster victim? In the case of Katrina disaster victims in Louisiana, FEMA estimates it will eventually expend more than $10 billion to provide human services (housing, crisis counseling, disaster unemployment assistance) to that population. Given such expenditures, government officials may be expected to make choices that combine sound stewardship of funds with efficient management.

Conversely, the misfortune of a natural or man-made disaster can determine a family’s housing choices and actual housing location for an extended period of time. But the housing aid offered has a couple of imperatives that may not be complimentary. A key question is whether the goal of the housing mission in the Stafford Act is to place families as close to their original residences as possible or to house as many people as economically as possible? In a catastrophic situation involving thousands of evacuees, the idea of choice may be temporarily exchanged for an immediate response, with difficult results. As the Director of the Natural Hazards Research and Application Center observed:

---

67 44 C.F.R. § 206.110(c).
Worse yet, instead of having their needs addressed in a timely manner, those stranded in New Orleans after Katrina were not so much assisted as they were policed. Literally treated like criminals, they were confined to shelters under strict control. Later, they were transported, again under the control of law enforcement agencies and the military, to over forty states around the country, without even having the opportunity to choose where they would be sent.69

The use of housing vouchers does not necessarily enable a victim to return to an area with very few remaining rental units available, nor can vouchers accommodate the desire of a displaced person for a rapid return. But the vouchers can provide a greater degree of choice, as a Heritage Foundation housing expert explained:

Obviously, giving evacuees access to housing vouchers that can be used in any metropolitan area in the nation will increase the likelihood that many will choose not to return. With vouchers, they will have access to better housing than they had in the slums of New Orleans and will have the choice to remain in communities where they can improve their standard of living and quality of life.70

After the Katrina disaster, FEMA generally provided the initial form of assistance it would normally provide in most disasters: rental assistance in the form of a check (or an Electronic Fund Transfer) equal to a couple of months rent for the area where the applicant was located. This provision of cash assistance provides flexibility to victims to use the funds to meet their housing needs and, if funds remain, to meet other disaster-related needs.

Housing vouchers issued by HUD can provide both choice and mobility. Also, given the nature of the vouchers being issued by housing authorities that establish relationships with landlords, the vouchers offer more controls and accountability. But in the case of Katrina, HUD vouchers were never used apart from the assistance given to some households that previously received HUD aid. Under the rubric of choice, the distinction between cash and vouchers becomes more challenging. A cash grant provides the ultimate discretion to a disaster victim on its use with reporting of those uses trailing months behind. A voucher also gives the victim wide latitude, but is more directed toward housing resources. Additionally, the relationship with the issuing authority (e.g. a local public housing authority) offers the potential of additional help for consultation on housing issues.

Most localized disasters do not involve the problems of applicants being displaced vast distances from their homes, jobs, and schools. The evacuation after Katrina had to be carried out rapidly, since there were no housing resources in the

flooded city. The speed of the evacuation appeared to make choice a moot point. Could the evacuation have been organized to a point where evacuees could have chosen a destination? The requirement for prompt action argued against that, but transportation funds were provided to reunite families at the location of their choice. Although difficulties are readily apparent, the matter of choice remains an issue for consideration in general for disaster housing law and policy.

Incentives for Communities. Some contend that, in light of the Katrina experience, the Stafford Act should include incentives for communities to host temporary housing sites. It may be argued that Congress provided some of this flexibility by replacing “temporary housing” with “semi-permanent housing” authority within the Post-Katrina Act (P.L.109-295). On the other hand, some may argue that hosting communities have existing incentives since they already benefit from spending by the residents of the sites at local business establishments where they purchase products and services, and pay local taxes.

In the same vein, it may be argued that FEMA should have explicitly defined authority regarding the agency’s ability to make large temporary housing sites more supportive of community spirit and recovery. As the earlier discussion in this section on “Management of Services” demonstrates, there has been confusion during the post-Katrina recovery as to who should or would even be permitted to provide such additional help for these temporary communities. Conversely, this form of support for the group trailer sites could become the fundamental contribution made by the state and its local governments to the temporary housing mission.

Unintended Consequences. For two decades (1975-1995) FEMA maintained its own manufactured housing storage sites (principally at Palo Pinto, Texas and Bluegrass, Kentucky) where the units were stored and refurbished for future use. This was a challenging proposition (as the current Hope, Arkansas experience attests) since the quality of the units’ upkeep was, at least in part, determined by the force of nature and age. The condition of the units was diminished further by repeated travel to disaster sites and back to the storage sites.

In 1995, FEMA’s Reinventing Government, Phase II Committee, recommended the closing of the two sites and the sale of the units, arguing that local purchasing, as needed, would be more efficient. The committee also noted that most temporary housing in the early 1990s had been provided through home repairs and rental assistance. This was partly due to the Northridge earthquake experience (at the time FEMA’s costliest disaster), where repair and rental assistance, due to the area affected, were more useful options for temporary housing than was manufactured housing. This recommendation was adopted; the sites were closed, and the GSA auctioned off and/or dispersed the remaining units. As a consequence, since stand-by contracts were not in place, FEMA officials had to make fast and expensive decisions to purchase thousands of housing units.

Another unanticipated consequence occurred with the reduction of repair funds from $10,000 or more to $5,000, the elimination of the Mortgage and Rental

---

Assistance Program (MRA) discussed later in this report, and the elimination of the option for households who failed to qualify for SBA loans to return to FEMA for additional help with home repairs. Those changes, enacted in the Disaster Mitigation Act of 2000 (DMA2K), arguably pushed FEMA back in the direction of providing direct housing assistance in the form of manufactured housing.

Previously, greater assistance had been available for home repair, since it had long been the preferred form of disaster temporary housing assistance. As GAO pointed out in its report following the Northridge earthquake in 1994: “Individuals and families whose homes are damaged can apply to FEMA for a grant, to make repairs to restore habitability. For the Northridge earthquake, applicants could obtain a maximum of $10,000.” But at times, the amount was more than that. As the FEMA Office of Inspector General pointed out, according to a study prepared by FEMA, “four percent received awards of $10,000 or more, which accounted for 18 percent of expenditures.”

The cap on housing repair was a significant part of DMA2K, P.L.106-390, and was the main source of savings in temporary housing that the Congressional Budget Office estimated at “$10 million for 2002 and $19 million in each following year.” The $5,000 cap had been a point of contention since its legislative imposition in 2000; changing the provision had been a goal of groups active in disaster recovery work.

Some tried, apparently without success, to read additional help for home repair into the law. But FEMA contended the cap provided no recourse for

72 42 U.S.C. § 5174.
77 Daily edition: Senator Robert Smith, et.al., “Robert T. Stafford Disaster Relief and Emergency Assistance Act,” remarks in the Senate, Congressional Record, (October 5, 2000), p. S10019. Since the DMA2K had been enacted without a House-Senate conference, several questions regarding legislative intent were in question. Former Senators Bob Graham and Bob Smith held a colloquy on their intent to allow applicants turned down by SBA to return to FEMA for additional help. It concluded with Senator Graham’s summary that “if an individual or a household was unable to obtain a loan from SBA, or assistance from another source, then they could be eligible to receive additional emergency home repair (continued...
families and individuals unable to obtain SBA loans. The cap has now been removed by the Post-Katrina Act. However, the cap on home repairs was in place during Katrina and for a year after that event. Given the smaller amount available for home repairs, as well as the devastation of the Katrina event that made repairs more costly and time-consuming, manufactured housing became the only alternative available under the time constraints created by Katrina.

The priority use of manufactured housing may not have been a preferred option, but it was one that, if coupled with a drastically diminished rental inventory in a disaster area (e.g., Katrina, unlike Northridge), provided housing opportunities as other possible housing avenues were decreasing. Vouchers offer some freedom of choice for displaced applicants, but the existence of vouchers alone cannot reconstitute rental housing options in an area as demolished as southern Louisiana.

**Closer to Home**: FEMA’s Original Plan. FEMA’s original plan for housing strategy solutions immediately following the impact of Hurricane Katrina, titled “Closer To Home,” anticipated some of the problems that have confronted the housing mission since September 2005. The plan included the concept of “transitional communities” to meet the needs of large events. These sites proposed that communities provide a temporary housing solution for disaster victims that would offer the amenities and support services that could lead to a transition back to their home communities. The plan also included the framework for that same transitional community to become a permanent housing addition to its host area. Though FEMA/DHS leadership did not act on the strategy, the Director of the Office of Recovery and Renewal for the State of Mississippi also noted the “transitional communities” concept as a promising avenue to explore as a means to “supplementing housing needs.” Opponents of the concept may contend that communities unwilling to accept temporary manufactured housing would be much less likely to consider a semi-permanent housing development.

Although the notion of transitional communities was not accepted in the early days of post-Katrina recovery, subsequent congressional action on “Katrina Cottages” and the concept of alternative housing indicates a policy shift in viewing temporary housing as a prelude to semi-permanent or permanent housing. When considering such an approach, maintaining a distinction between catastrophic disasters and most disasters may be useful. The larger events arguably invite bold

---

77 (...continued)
assistance ...” Senator Smith concurred with that assessment of the legislation.

thinking and creative approaches. Many smaller disasters do not require transitional communities, only the repair and restoration of the disaster-damaged community.

**Victims Without Homes.** Even with the enormous commitment of federal resources following Katrina and the varied forms of available help, there were still applicants deemed ineligible for traditional federal assistance programs (from both FEMA and HUD). These were people with no previous permanent address who were not receiving official government help before they were evacuated. In many instances they became wards of the community that had accepted them as evacuees. However, HUD did provide voucher assistance for this special group through the Katrina Disaster Housing Assistance Program - Special Needs (KDHAP-SN) program and subsequently the Disaster Voucher Program. Congress may wish to explore the needs of these applicants and their status (previously homeless, part of a separated household, etc.) in future disasters to determine if the help provided should be by exception or through standard programs.

To date the answer has been simple and direct under FEMA authorities: previously homeless individuals and families will return, as with other disaster victims, to their pre-disaster status. When they are moved from the mass shelters they will again be homeless. Reliance upon only this approach, following Hurricane Katrina, would have meant that these individuals and households were solely dependent upon the local government and the existing social service structure in the area that had hosted their evacuation. But given the help from the KDHAP-SN program, the local hosts had some resources to call upon to meet the special needs of this population.

Should the fact of being in a disaster area improve someone’s circumstances? Perhaps not, but the government also can consider the results it wishes to see from its investment in such an event. If FEMA temporary housing assistance is not available under current regulations for previously homeless families and individuals, then the KDHAP-SN program can be a model in the post-disaster environment for limited service for a known population with identified needs.

FEMA had faced similar problems in the past with distinctly different responses and results (see Appendix B of this report). The issue before Congress is whether federal disaster policy should essentially return victims to their pre-disaster conditions or whether the disaster recovery process should facilitate an improvement in conditions, or at least a continuation of previous aid, such as the HUD program in the wake of Katrina.

**The Road Home.** The “Road Home” program in Louisiana is seeking to merge Community Development Block Grant (CDBG) funding and FEMA Section

---

404 hazard mitigation grant funds and other funding sources to re-establish communities. This is the large program to rebuild and replace and help compensate homeowners and encourage their return. Follow-up studies and the data from this program may provide important information on how, or if, Stafford Act assistance contributed to the eventual reconstruction of communities on the “road home.”

FEMA has raised objections that the “Road Home” program may not be following the “statutory direction” of the Stafford Act. The prime “statutory direction” FEMA is referencing is the use of Hazard Mitigation Grant Program (Section 404) funds within the “Road Home” to assure safer and more disaster resistant housing. Section 404 is the section within the Stafford Act that authorizes mitigation assistance. Mitigation projects are the projects that provide protection from natural hazards and help to reduce damage from future disaster events. Given the rebuilding going on in the disaster area, FEMA’s emphasis on stressing the hazard preventive nature of these funds appears to reflect the intent of Section 404. What is unclear in the dispute is the degree of collaboration between FEMA and the State of Louisiana to ensure that the repair or replacement of homes under the “Road Home” are incorporating mitigation measures to build back safer and reducing future risk.

Another source of the dispute is that the state has been seeking federal funding commensurate with the number of homes destroyed or with major damage. The federal government has responded that the help was intended only for flooding victims and not for homeowners who lost their homes due to hurricane force winds. Some may contend that rather than using Section 404 funding for eligible mitigation purposes, state officials hope to use the money to reach an anticipated level of funding in order to help applicants return home.

Mortgage and Rental Assistance. Congress might elect to give attention, in the reviews of the recovery phase of Katrina, to how mortgages were handled. Various lenders suspended payment schedules or made other allowances that permitted homeowners to hold on to their homes while still being able to fund their own interim housing needs. For example, a report by the Government Accountability Office (GAO) noted that:

HUD’s Federal Housing Administration (FHA) also issued a 90-day moratorium on foreclosures for all FHA-insured loans on properties located in areas affected by Hurricanes Katrina and Rita. HUD subsequently extended the moratorium on foreclosures twice for areas eligible for FEMA’s Individual Assistance, because it found that due to the magnitude of storm damage, lenders and borrowers may still need additional time to develop and finalize plans for home repairs and resumption of mortgage payments.
The initiatives of Fannie Mae were another example of special steps taken in the aftermath of Katrina were. As a Fannie Mae official explained:

To address the potential for “sticker shock” down the road when homeowners began to make up missed payments we authorized loan servicers to modify loan terms and develop repayment plans. We placed a one-year moratorium on all foreclosures in the most damaged areas. Once that moratorium expired we continued to work through our lender partners to give individual homeowners time to pursue insurance and government assistance and make critical decisions about rebuilding and relocating. Also we asked credit agencies not to report mortgage payment delinquencies.86

Congress could opt to evaluate the FHA and Fannie Mae actions. The Section 408(b) Mortgage and Rental Assistance (MRA) program of the Stafford Act, as amended in 1974, was not included in the Section 408 amendments in DMA2K that took effect following the World Trade Center disaster. The MRA program helped victims maintain their mortgages and rents until they could return to the area and their dwellings. FEMA, however, concluded that it was too cumbersome administratively to “1) define the victim ...2) determine the extent of the applicant’s inability to pay ... 3) ... verify losses of income and late payments and ... 4) determine the appropriate period for the provision of MRA assistance.”87 Congress apparently agreed, and struck the MRA authority from the Stafford Act. Thus, MRA was not available from FEMA for Hurricane Katrina victims.

Katrina Cottages. The “Katrina Cottages” program grew out of the architectural suggestions that were a part of the creative response to this catastrophic event. “Katrina Cottages” now serves as a generic term for alternative housing that provides more living area, a more attractive physical appearance and the capacity to withstand hurricane force winds. The “Katrina Cottages” generated so much interest that Congress authorized a trial program to evaluate different versions of these dwellings in different settings across the Gulf Coast.

The “cottages” may eventually be considered an alternative to FEMA’s current use of manufactured housing. The changes in P.L.109-295, specifically the references in the post-Katrina Act to “semi-permanent” housing, arguably authorize the use of such cottages. The awards for this $400 million pilot program have been made amidst some controversy regarding the selection process.88 A report by the DHS Inspector General observed that “As a consequence of FEMA decisions, the communities hardest hit by the 2005 hurricanes did not receive proportional shares...
As this pilot program progresses it may warrant additional study to assess its impact and whether it lends itself to replication in varied disaster settings.

## Legislative Options

**Catastrophic Tier.** A catastrophic tier for disaster relief, in housing and other elements of the recovery process, is a policy area that Congress might wish to address. The aftermath of Hurricane Katrina illustrated the challenge of implementing Stafford Act programs on a large, national scale. Programs that work effectively in a multi-county area of one state or two can be overwhelmed by a multi-state catastrophic event that poses problems not previously addressed.

The catastrophic disaster tier could be triggered by the number of potential applicants or evacuees, estimated damage (including a large per capita amount), or disruptions to continuity of government. Other factors could include widespread, nationwide dispersal of population, questions regarding the viability of the affected areas to allow residents to return, the span of the geographical area affected, destruction to centers of employment, the time residents might be forced to be away from their homes, and similar elements.

Any catastrophic tier could arguably be tied to a high threshold not easily reached in lesser events. The rhetorical argument often broached is that every disaster, regardless of size, is a catastrophic event for the individuals and families involved. While this argument would be difficult to sustain, some might attempt to do so. Some states may point to their own limitations (legal and budgetary) as an argument for waivers of cost-shares and regulations in non-catastrophic events. The Stafford Act already provides the President with the discretionary authority to make judgments on when an event is beyond the capabilities of the state and local governments. But while that discretion is provided for an initial disaster declaration, additional guidance might be desirable to establish criteria for a separate tier for catastrophic events. The following are some of the policy areas that could receive attention with regard to disaster housing after “worst case” events occur.

**Catastrophic Housing.** A catastrophic event could have an automatic three-to-six month FEMA Section 403 sheltering/housing program for all disaster victims, with FEMA Section 408 assistance commencing for all eligible applicants at the same date and time when the system is ready to absorb the large numbers. The time-span of such a sheltering/housing program could be shifted to nine or 12 months, depending on the federal and state governments’ ability to make contact with victims and provide them resources for alternative forms of housing. This would help to address equity concerns.

Congress could opt to amend the Stafford Act or the pertinent HUD authorities to have the catastrophic tier trigger a special six-to-18 month voucher program administered by HUD (preferably for this discrete purpose and not impinging on HUD Section 8) for disaster victims. This would not be an inexpensive alternative, since it would likely be in addition to

---

90. 42 U.S.C. §5170.
current Section 8 vouchers and not supplanting those vouchers. Past experience, however, also indicates that it is difficult to impose such a time cap on housing vouchers.91

But the same concerns with costs exist regarding current FEMA temporary housing practices. The FEMA temporary housing program has been extended for long periods, and the cost of setting up manufactured housing sites is expensive and complicated for local governments.

The HUD approach has the benefit of tapping existing resources (local public housing authorities) that can provide case management or other services and also linking some victims with longer-term housing aid that they may require. This latter linkage is also something that, arguably FEMA and HUD should consider for all major disaster declarations that result in long-term housing challenges. Some may contend, however, that disaster housing is best administered by FEMA officials, not individuals concerned with “long term” or permanent housing.

Another factor that might be considered as Congress weighs this issue is whether people unfortunate enough to be within an area declared a major disaster by the President are then entitled to more housing assistance than ordinary citizens who have been waiting for similar help for an extended period of time. This is another side of the equity question raised earlier. The voucher approach raises this question of fairness, given the long waiting list for HUD vouchers in most communities.

Incentives for Communities. The Katrina experience arguably illustrates that FEMA (or HUD) needs specific language, with an explicit definition of community housing, to provide or augment the basic support services that communities require when hosting a temporary housing group site. On the other hand, Congress could consider a definition that specifically prohibits such inducements. As the earlier discussion on “Location” shows, very little assistance is offered to a community willing to absorb a significant number of disaster victims. While debate may ensue on which option is the better policy, there is arguably little debate that clarification of the issue would eliminate future confusion and would speed actions during the post-disaster period.

FEMA Group Site Management Services. The required contributions by either FEMA or the state to the quality of the temporary housing group sites could be more explicitly stated in the law to make a clear delineation of responsibility for the provision of such supportive services. One difficulty in such an approach is that often the affected governments are victims themselves in the early stages of disaster recovery when these large sites are being established. For that reason, the provision could be flexible and provide FEMA the discretion to approach this problem on a case-by-case basis. Also, if the assumption is that non-profits and charitable groups can provide such support, then disaster housing polices and processes could encourage this help.

MRA Restoration. An examination of the Katrina experience may arguably suggest whether the Mortgage and Rental Assistance (MRA) program was a missing component in the menu of available help for disaster victims in this event. The FHA and Fannie Mae

---

91 For more information, see CRS Report RL33173, *Hurricane Katrina: Questions Regarding the Section 8 Housing Voucher Program*, by Maggie McCarty.
examples point to the possible alternatives that would make the MRA provisions unnecessary. However, these ad hoc responses were triggered by a major catastrophic event. It is unclear if similar actions can be presumed for other presidentially declared disasters on a smaller scale. If the program is restored, it could be run cooperatively with FEMA by another department or agency with expertise in this area, similar to the Department of Health and Human Services involvement with the Crisis Counseling program or the Department of Labor’s management of the Disaster Unemployment Assistance (DUA) program.

**Regulatory Waivers.** Congress could opt to provide for automatic waivers following a catastrophic event. Such waivers of current regulations could accelerate early response work and the eventual recovery operations. This could involve automatic waivers or streamlining of regulations regarding debris removal (on both public and private property), environmental and historic preservation, and the waiver of cost-share commitments by affected state governments.

Some of these waivers are currently employed during disasters by FEMA on an ad hoc basis using its authority from the Stafford Act to waive certain administrative conditions. The authority is used sparingly by FEMA. While this process can be accelerated, it could be expedited if automatically triggered by a catastrophic event. Also, the sooner regulatory waivers are decided, the faster recovery activity can advance.

**Cost-Share Waivers.** Currently, Stafford Act Sections 406 and 407 of Public Assistance (infrastructure repair and debris removal), can be adjusted from a 75% federal and 25% state and local cost share to a 90/10 cost-share for large-impact disasters. These large disasters are defined as a per capita cost of over $117 per state resident as of FY2007. Often, debris removal costs are waived for the opening days of a disaster, generally for a 72 hour period chosen by the state. For Katrina, the debris removal costs were waived indefinitely.

Congress might explore the implications of allowing Other Needs Assistance (ONA) within Section 408 (and cost-shared by statute at 75/25) to be provided at the same 90/10 percentage. Congress might also consider making ONA 100% federal assistance when the actual spending for essential assistance involves many states outside those affected by the event. Congress recently passed legislation, signed into law by President Bush, which accomplishes this waiver for the Katrina disaster. While such considerations are acute for a catastrophic disaster, they arguably should also be considered for non-catastrophic disaster events.

Another possibility would be that since ONA spending is done in conjunction with the state, the affected states and FEMA regions would continue to compile a list of eligible items and costs that might be reimbursed through a block-grant program administered by the state. The responsibility of administering the program could then become the state contribution, assuming the state has retained the capacity to manage it after a significant disaster event. This alternative would be applicable in non-catastrophic events, too.

93 44 C.F.R. § 206.47.
94 P.L. 110-28, 121 Stat. 156.
A cost-share serves not only as a necessary legal contribution from the state; the investment it represents may also result in more discerning judgment and may contribute to the quality and quantity of projects submitted for supplemental help. The difficult challenge, under a generous cost-share, is to retain that leverage or incentive for the responsible selection and prioritization of projects by the state to ensure that federal objectives are achieved.

**Administrative Responsibility.** Another policy question is which federal agency should be primarily responsible for catastrophic disaster housing. Should HUD run the longer housing/sheltering program through state and local housing authorities and non-governmental organizations (NGOs) since it has experience with voucher programs and ongoing relationships with those same metropolitan housing authorities and related NGOs? While such an approach makes sense for large events spread out over many states and localities, some may contend that using the same approach on smaller disasters may be problematic. In those instances, the management of housing resources would be falling on the locality with the fewest resources and to the entity (a unit of local government) that may, itself, be a disaster victim. Alternatively, HUD does have the capacity to call on its relationships with PHAs around the country to assist with unmet needs so a transition to HUD for the housing mission may be the most sensible approach.

On April 26, 2007, the Administration announced a plan in which FEMA and HUD would collaborate to provide housing to Katrina victims for an additional 18 months beyond the current August 2007 deadline. This, coupled with previous Katrina experience, may provide a test case for the efficacy of this approach.

**Concluding Observations**

The housing strategy employed following Hurricane Katrina was driven by size, time and circumstance. While some decisions were forced by immediate needs, others were choices made by FEMA, DHS, and the Administration. Still other decisions were driven by choices not made, avenues not explored, perhaps due to caution, or decisions postponed, which became tantamount to decisions themselves. Since the Administration did not request expanded authorities, the traditional FEMA housing programs for much smaller disasters became the default action plan of the federal government for the largest natural disaster event in U.S. history. It can be argued that parts of this plan worked very well, such as the rental housing provided by hosting states. However, other parts, such as the dependence on mobile homes and travel trailers, appear not as suitable to either the magnitude or location of this catastrophic event.

What should disaster temporary housing be? Is it mainly a home-repair option or a rental-assistance option (either with cash assistance or a voucher), or should manufactured housing be presented as the only option? FEMA itself has had a shifting emphasis over the years, much of it driven by the nature and location of individual large disasters, which in turn has moved its policies and vehicles for providing temporary housing on a large scale. That shifting emphasis is reflected in the temporary housing response to Katrina. A more definitive
approach might be helpful to FEMA, its state partners, and the disaster victims; flexibility, however, might also be needed.

Despite the very real problems encountered by victims, their communities and their host communities, thousands of families and individuals have received a significant amount of supplemental aid from the government for housing. At present, the amount of funding spent on housing (both rental assistance and manufactured housing) for the Gulf Coast hurricane season of 2005 stands at over $10 billion.\(^{96}\) FEMA and other staff at federal, state, local, and voluntary agencies struggled to address an unprecedented event. There have been many challenges along the way, perhaps most importantly, the difficulty in communicating complicated housing policy decisions to a vast and dispersed population.

Many of the staff involved, both in the governmental and non-governmental sectors, at all levels, provided assistance through the temporary housing programs and administrative channels that existed. Those programs were severely challenged by a disaster of unprecedented size, compounded by unique problems of devastation and mass evacuations. New partnerships were established and federal resources were generously invoked, if not always judiciously employed. Programs that can work well for a “garden variety” disaster may not be appropriate for a catastrophic event. Assumptions based on the average can be overwhelmed by the exceptional. For an event such as Katrina, new approaches were apparently considered but rejected in favor of the familiar. This is understandable given the propensity to avoid establishing precedent based on an outlier event, and the body of law and regulations and policies supporting current housing practices. However, effective leadership, and carefully drawn legislation, can help to distinguish between the extraordinary and the common events and respond in the national interest.

Even now, more than 23 months after Katrina’s landfall, Congress continues to debate long-term recovery roles among federal agencies and state governments that are at once as uncertain as they are consequential. Congress could opt to consider the lessons of this disaster in terms not only of program adjustments and corrections, but also the appropriate governmental role throughout the recovery process for any possible future events of this magnitude.

Appendix A - HUD and Other Federal Housing Resources

While FEMA has the principal responsibility for temporary housing following a Presidentially declared disaster, the Department of Housing and Urban Development and other federal departments and agencies also played a prominent role in the post-Katrina housing mission. Information about the involvement of HUD and other federal partners in providing housing aid; along with the size and extent of their mission in the disaster housing arena, follows.

**KDHAP and HUD Assistance.** – This was the Katrina Disaster Housing Assistance Program paid for by FEMA (from the Disaster Relief Fund) but managed by HUD through an inter-agency agreement. Under this program, HUD assisted those citizens who had previously received HUD housing assistance at the time of the disaster. The cooperation between FEMA and HUD has been inconsistent throughout the process. As a result, Congress eventually transferred the funding to HUD for this purpose. It was at this point that HUD renamed the program the Disaster Voucher Program (DVP replacing KDHAP). Regardless of the acronym employed, the HUD-assisted program appears to have reached its targeted population.\(^97\) Further cooperation and information sharing between FEMA and HUD (and other federal agencies) might contribute to applicants being aware of all housing options and also lessen each program’s susceptibility to fraud.

There have been frequent references to HUD Section 8 housing vouchers as a solution for the Katrina evacuees. The response to the Northridge earthquake in 2004 is usually listed as a prime example of the efficiency of this approach.\(^98\) FEMA provided over $140 million in immediate housing help in the form of funds for applicants to rent alternative living spaces (three months to homeowners and two months to renters) to more than 47,000 households.\(^99\) Our consideration is whether such vouchers should be limited as disaster housing assistance is (generally 18 months), or if they should continue to be renewed in the manner of regular Section 8 vouchers.

For the Katrina disaster, unlike some other disasters, HUD’s help was focused on assisting its own population of clients that had been displaced by the disaster. As noted earlier, the Disaster Voucher Program is the successor to KDHAP (though, unlike KDHAP it also provides help to Hurricane Rita victims, explaining the more generic title) and helps Hurricanes Katrina and Rita victims maintain housing over a longer term. The DVP vouchers are administered by local Public Housing Authorities (PHAs), which were granted a degree of discretion in their use and in defining the coverage of expenses. Congress provided $390

million for this program; it is projected to conclude on September 30, 2007. Given the announcement on April 26, 2007, of a proposed extension of FEMA housing help and a transfer to HUD, these dates may be adjusted depending on the reaction of Congress to that plan.

In addition to its other programs, HUD, along with other federal entities, provided housing assistance in the form of their own inventories of housing stock. In addition to HUD, other federal entities providing available housing included the Department of Agriculture, the Department of Veterans Affairs, and Fannie Mae. This assistance was also provided through inter-agency agreements. Some of the houses made available were immediately helpful, while others were in areas too remote to benefit the disaster victims. That is a central consideration when assessing housing resources for disaster victims interested in being close to home or at least close to new employment and educational opportunities. FEMA has been tasked by P.L. 109-295 to convene a group to devise a National Housing Strategy. This will include HUD and the other federal players, as well as other parties with experience in the disaster housing arena.

While chartered by Congress, the Federal National Mortgage Associations (Fannie Mae) is a private, shareholder-owned company. Given that special status and a mission to increase the prospect of home ownership for low and moderate income families, Fannie Mae’s contributions following Katrina have been significant. The company made some of its properties available for rent-leasing for up to 18 months for Katrina victims. In all, Fannie Mae provided

1,500 single-family properties from its inventory of Real Estate Owned (REO) for temporary housing for individuals and families displaced by hurricane Katrina. Nearly 4,600 evacuees have been provided temporary housing at no cost through the company’s initiative. ... Today, Katrina evacuees are living rent-free in Fannie Mae-owned properties in 20 different states. ...[Fannie Mae] is also making $15,000 available for down payment and closing cost assistance for qualified evacuee families who wish to purchase any Fannie Mae-owned home any time during their rent-free lease period. To date, 80 families have taken advantage of the assistance and purchased the Fannie Mae-owned properties.

101 120 Stat. 1446.

Appendix B - Victims Without Homes: The Loma Prieta Earthquake and Hurricane Andrew

Loma Prieta Earthquake. Following the Loma Prieta earthquake in the autumn of 1989, FEMA administered a large temporary housing program. FEMA asked for proof of residency before providing assistance and required that an applicant live at least 30 days at one address to be eligible for assistance. Due to the unique nature of the Bay Area’s low income population, many of the applicants had lived in Single Residency Occupancy (SROs) apartments that were similar to YMCAs. Due to the force of the earthquake, approximately 2,200 of these rooms had been lost. Often times the applicants had stayed in these rooms for fewer than 30 consecutive days. For this reason, FEMA judged them to be ineligible for temporary housing assistance.

The Legal Aid Society of Alameda County sued FEMA over its interpretation of eligibility and prevailed in court. The plaintiffs realized that temporary housing, as defined under Section 408, would not help the applicants because they no longer had SRO rooms available to them. They also realized that the private property owners of the buildings might not be interested in remaining in the SRO business. Instead the settlement was for financial resources to help restore that part of the housing stock. The eventual settlement was for

$23 million to fund 2,200 SRO units. The settlement sum was arrived at by multiplying the number of SRO units lost by a unit cost of about $10,500. The flexibility of the final settlement was ideal from the point of view of the local agencies, because the funds were provided in a block grant fashion to the counties and as such allowed them the freedom to decide how to put the money to best use, with very few restrictions. Overall, 1,200 to 1,500 units were actually rebuilt using lawsuit funds.\footnote{Mary C. Comerio, Housing Repair and Reconstruction After Loma Prieta, at [http://nisee.berkeley.edu/loma-prieta/comerio.html], visited March 21, 2007.}

Since FEMA funds could not be provided to private developers, the local governments arranged for the sale of the buildings to non-profit groups, sometimes using Community Development Block Grant funds to complete the projects.\footnote{Ibid.}
**Hurricane Andrew.** In the aftermath of Hurricane Andrew in 1992, FEMA had a very large temporary housing program in south Florida. Here, too, many people in the area when the hurricane struck were judged not to be eligible for FEMA temporary housing assistance because they could not prove previous residency through rental agreements. However, in this instance FEMA found a way to work with the local community and contribute to the solutions.

The [Dade] County Manager’s Office of Homelessness working “in conjunction with Catholic Community Services first attacked the homeless family problem by establishing a tent city. This comprehensive approach included day care, job counseling, and mental health assistance. Unfortunately, the tent city proved too vulnerable to bad weather and had to be closed. Subsequently, through a coalition of homeless providers and the County, a plan for expanding shelter bed availability was approved. Local agencies involved in hurricane response have received FEMA funds to continue their expanded services and to initiate new projects to address post-Andrew needs.”

---

Hurricane Katrina was a destructive Category 5 storm that made landfall on the U.S. Gulf Coast in August 2005. The storm triggered catastrophic flooding, particularly in the city of New Orleans, and caused more than 1,800 deaths. Neighborhoods that sat below sea level, many of which housed the city’s poorest and most vulnerable people, were at great risk of flooding. The day before Katrina hit, New Orleans Mayor Ray Nagin issued the city’s first-ever mandatory evacuation order. The Federal Emergency Management Agency (FEMA) took days to establish operations in New Orleans, and even then did not seem to have a sound plan of action. Hurricane Katrina was the costliest storm in U.S. history, and its effects are still felt today in New Orleans and coastal Louisiana. The devastating aftermath of Hurricane Katrina exposed a series of deep-rooted problems, including controversies over the federal government’s response, difficulties in search-and-rescue efforts, and lack of preparedness for the storm, particularly with regard to the city’s aging series of levees—50 of which failed during the storm, significantly flooding the low-lying city and causing much of the damage. Ten years after the disaster, then-President Barack Obama said of Katrina, “What started out as a natural disaster became a man-made disaster—a failure of government to look out for its own citizens.” Hurricane Katrina made landfall on August 29, 2005, in southeastern Louisiana, with maximum sustained winds of 140 mph. Hurricane-force winds extended outward up to 105 miles from the center of the storm. In the wake of this devastating event, the Federal Emergency Management Agency (FEMA) initiated a project to produce high-resolution maps that show flood impacts from the storm for portions of St. Tammany, Tangipahoa, St. John the Baptist, St. Charles, Jefferson, Orleans, St. Bernard, and Plaquemines Parishes. The Hurricane Katrina Surge Inundation and Advisory Base Flood Elevation Maps (also referred to as “Katrina Recovery Maps”) can be viewed at the Maps link on this site.
